David Stevens, Project Director
Health Care “Cluster” as defined for MEETS project

Industry Groups ("sub-clusters") include:

- 6211 Offices of physicians
- 6212 Offices of dentists
- 6213 Offices of other health practitioners
- 6214 Outpatient care centers
- 6215 Medical and diagnostic laboratories
- 6216 Home health care services
- 6219 Other ambulatory health care services
- 6221 General medical and surgical hospitals
- 6222 Psychiatric and substance abuse hospitals
- 6223 Other hospitals
- 6231 Nursing care facilities
- 6232 Residential mental health facilities
- 6233 Community care facilities for the elderly
The trend of health care employment since the beginning of 2000 was six quarters of net gain followed by three quarters of net loss.
A look at selected industry groups shows that Medical & Surgical Hospitals are largely responsible for Health Care’s decline in Net Job Growth, first observed in Figure 1.
Gross Job Gain & Gross Job Loss Trends in Health Care

Significant job gain can occur even during periods of significant job loss - the highest total for each occurred in the same quarter (2003:1).

New Hire Trends in Health Care Industry Groups

The level and mix of new hires by health care organizations varied quarter-to-quarter over the last year among physician offices, hospitals, and nursing care facilities.
New Hire Trends in Health Care by Gender

Nearly 75 percent of those hired by health care organizations in each of the most recent four quarters were women.
New Hire Trends in Health Care by Age

New hires by health care organizations in each of the most recent four quarters were concentrated in the age group 25-54 years.
Among new hires ages 25-54 years, the male advantage in average monthly earnings increases from 17 percent for 25-34 year olds to 61 percent for 45-54 year olds.
The age-related increase of a male earnings advantage among new hires in health care organizations, first observed in Figure 9, is concentrated in physician offices and those ages 35-54 years.
